DETAILED ACTION

Allowable Subject Matter

Claims 27-37 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 27-31, there is no teaching or suggestion in the art of record disclosing a static random access memory cell comprising first and second inverters having a doped active area common to the drains of the first conductivity type transistors and a contiguous region in the substrate extending from the drain of one of the first conductivity type transistors to the drain of the other first conductivity type transistor in combination with the isolation limitations of independent claim 27.

Therefore, independent claim 27 is deemed allowable along with its dependent claims 28-31.

Regarding claims 32-37, there is no teaching or suggestion in the art of record disclosing a static random access memory cell comprising first and second inverters, each comprising a pullup transistor and a pulldown transistor, having an active area common to the drains of first and second pulldown transistors in combination with all other limitations of independent claim 32. Therefore, independent claim 32 is deemed allowable along with its dependent claims 33-37.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
